2018033_CV_HW13: Q1 Done

Code: *FILE: corresponding.py*
- Images were resized (due to slightly different sizes)and combined into a single image.
- KMeans clustering was run on this combined image.
    - `cv2.kmeans` is the external library function used for clustering the images.
- Corresponding cue values were calculated by the formula taught in the class.
- The cue values and the cluster centers were mapped back to the original images.
